Experience

Klaviyo

Product Design Co-op
Jan 2026 - July 2026

Resolved systemic UX debt by implementing content organization design patterns, shipping a **new folder system** of four components and aligning senior stakeholders to shift the platform's mental model.

Standardized 6 custom carousels into a single canonical component by **owning the design-to-code** implementation and deploying to the component library.

Shipped an AI prototyping pipeline utilizing the Figma MCP and custom skills to scaffold React code from wireframes, eliminating the coding barrier for non-technical designers and **earning executive recognition**.

Built a VS Code extension that audits pages affected by component updates across a 98+ package mono-repo, **replacing a multi-hour manual pre-release review**.

Verizon

Software Engineering Co-op
Jan 2025 - July 2025

Designed and shipped a data platform that aggregates and visualizes public customer sentiment to inform retention strategy, running bi-weekly research sessions with Verizon's AI&D team to guide product decisions on a **\$150M+** quarterly churn problem.

Defined product scope for a **6-engineer team**, translating abstract requirements into features, running technical spikes to validate NLP model feasibility before committing to builds, and structuring delivery into milestone phases.

Built **50+ responsive components** using Verizon Design System, enabling quicker builds, accessibility compliance and platform consistency within the Verizon application ecosystem.

Code4Community

Director of Design
Jan 2025 - Present

Led the design pillar for a **70+ member** student organization, overseeing deliverables and client relationships for **13 unique nonprofit clients** while providing design direction and hands-on support to direct reports.

Established **organization-wide standards** for design systems and reusable component libraries, reducing design-to-development handoff overhead and creating more consistent, scalable product experiences.

Education

Northeastern University - May 2027

B.S. in Computer Science & Design, Minor in Computational Data Analytics

GPA: 3.9/4.0

Skills & Tools

Skills: UX/UI Design, Design Systems, User Research, Information Architecture, Accessibility, Software Engineering

Code: React, Javascript, Typescript, Python, HTML/CSS, SQL, Git, Claude Code, Cursor, v0

Tools : Figma, Adobe Suite, Figjam, Linear, Jira, Miro
